ABSTRACT

This document presents tables of data on enrollment and geographic origins of first-time, full-time students attending postsecondary institutions in New York State for 6 years between 1981 through 1992. Categories of data include county of residence of students, names of individual colleges, and institutional sector (State University of New York, City University of New York, independent institutions, and proprietary institutions). Data for students from outside the state are aggregated into two groups: U.S. residents outside of New York and foreign residents. These data are intended to support campus enrollment planning and management efforts. The introductory section provides five tables which summarize all the data, including the relation of first-time, full-time enrollments to New York State high school graduates. They also show, in integer and percent distribution format, enrollment by institutional sector for students from New York State and from outside of New York State. Part 1 provides summary reports, first of postsecondary enrollments by geographic origins; and, second, of percent distribution of postsecondary enrollments by geographic origin, institutional sector, and for each of the 6 years. Part 2 presents detailed reports of postsecondary enrollments by geographic origin and specific enrolling institution. (CK)

INTRODUCTION

This publication contains information on the enrollment and geographic origins of all first-time, full-time students attending postsecondary institutions in New York State. This statewide trend data is not available in any other single publication.

In addition to a number of summary level displays, data are provided at the level of individual postsecondary institution and, for residents of New York, their county of residence. Data for students from outside New York are aggregated into two groups: non-New York, U.S. residents and foreign residents.

The intersection of information on student residence and enrolling institution is intended to answer the following question: *How are enrollments of first-time, full-time students from a selected geographic origin distributed among New York State's postsecondary institutions?* The ability to examine the geographic sources and enrollment distributions on a statewide basis should be particularly useful in supporting campus enrollment planning and management efforts.

The cooperation of the New York State Education Department was crucial to this project. Not only did they provide the data files required to create this report, but they also provided invaluable assistance that ultimately permitted us to develop an appropriate methodology for linking discrete yearly enrollment files in order to obtain a single report showing trends across time.

Our thanks are also extended to Ms. Lori Young of the Office of Policy Analysis who is responsible for the production and distribution of this report.

REPORT STRUCTURE AND SUMMARY TABLES

This report contains information on the geographic origins and enrolling institution for all full-time, first-time students in New York State. The information covers the enrollment periods of fall 1981, 1983, 1985, 1987, 1990 and 1992.

The report facilitates answering questions linking the geographic origins of students with their enrolling institution. For example, the report allows one to identify the specific postsecondary institutions in New York State attended by first-time, full-time students from Erie County, or the institutions attended by students from outside of New York.

The major sections of the report are organized by the permanent residence of the students. The categories of geographic residence used in the report are:

- (1) New York State - listed by individual county
- (2) United States other than New York
- (3) Foreign
- (4) Unknown origin

In the case of New York State, the counties are listed in alphabetic order with the exception of the counties comprising New York City; these are listed in alphabetic order after all other counties, i.e., after Yates County.

Enrolling institutions are listed in alphabetic order within institutional sector; summary data are provided for each sector. The sectors listed are:

- (1) State University of New York
- (2) City University of New York
- (3) Independent Institutions
- (4) Proprietary Institutions

The main body of the report is divided into two parts. Part I contains summary level reports and Part II contains institution specific detail. Part I does not display individual institutional enrollments; institutional data are aggregated at the level of campus types within sectors. There are two distinct summaries in Part I; the first displays actual enrollments, and the second displays the data as percent distributions. Part II of the report contains all of the detail level information at the intersection of student origin and enrolling institution.

The following five tables (pp. ix - xiii) provide an additional summary of the data, including the relation of first-time, full-time enrollments to New York State high school graduates.

The first four tables show, in integer and percent distribution format, enrollment by institutional sector for students whose residence is in New York State (pp. ix, x) and for those whose residence is outside New York State(pp. xi, xii).

The fifth table (p. xiii) focuses on first-time, full-time students from New York State and New York State high school graduates. Sector enrollments are displayed, and those enrollments are shown as a percent of the State's high school graduates.
